

CITY OF BROWNWOOD WARNING SYSTEMS

The City of Brownwood has two warning systems. The first is CodeRed. CodeRed is a phone-based system used to notify Brownwood of emergencies or important information. The system has the ability to call up to 1,000 phone numbers per minute and deliver full, accurate messages to answering machines and in person. The number you will see on your caller-Id is 866-419-5000. CodeRed cannot at this time, provide any other caller-Id, so please take note of the number. Phone numbers for City of Brownwood residents may be changed or numbers added by going to web address: www.ci.brownwood.tx.us. If internet is unavailable to you, call city hall, 646-5775 and provide your name, address, and phone number/s you would like to have on the system.

Sirens are the City's second system used for warnings. The long steady tone is a warning tone and the up and down/wavering tone is the attack or immediate danger notification. The sirens are tested on the first Monday of each month at noon.

The City of Brownwood will use both warning systems in the event a warning is issued. When a warning is issued, tune to a local television station or local radio station for information. The use of a Hazard Alert Radio (weather radio) is highly recommended in homes and businesses. By using the Hazard Alert Radio, the user will get notification at the same time as the City. Hazard Alert Radios are available locally for purchase.
